Task # 8: Smart To-Do List Calendar

Objective

Students will build a **Smart To-Do List Calendar Web Application** where users can manage daily tasks using a calendar interface.
Users should be able to add, edit, and track tasks for specific dates.

Students may use **HTML, CSS, JavaScript, or any web framework (React, Vue, Bootstrap, etc.)**.

Task Requirements

1. Calendar Interface

The application must display a **monthly calendar view** where users can select a date.

2. Add Task

Users should be able to add tasks for a specific date.

Fields should include:

- Task Title
- Task Description
- Task Priority (Low / Medium / High)
- Due Time (optional)

3. Task Display

- Tasks should appear on the selected date.
- Multiple tasks can be added for the same date.

4. Edit / Delete Task

Users must be able to:

- Edit an existing task
- Delete a task

5. Task Status

Each task should have a status option:

- Pending
- Completed

Completed tasks should appear visually different (for example: strikethrough or different color).

6. Task Filter

Users should be able to filter tasks by:

- Completed
- Pending
- All Tasks

7. Calendar Navigation

Users should be able to:

- Move to previous month
- Move to next month

8. Responsive Design

The application should work properly on:

- Desktop
- Mobile devices

9. Local Storage

Tasks should be stored in **browser local storage** so that tasks remain available after refreshing the page.

Functional Requirements

The application must include:

- Calendar interface
- Task creation form
- Edit and delete functionality
- Task status system
- Local storage implementation
- Responsive layout
- Clean UI design

Evaluation Criteria (10 Marks)

Criteria	Marks
UI Design and Layout	2
Calendar Functionality	2
Task Management (Add/Edit/Delete)	2
Task Status and Filters	2
Local Storage and Code Quality	2

Total Marks: 10

Submission Requirements

Students must submit:

- Project folder (HTML, CSS, JS files or framework project)
- Live demo link (Netlify / Vercel / GitHub Pages)
- Submit through rar or mediafire link
